

LeafLock 62% Humidity Control Packs

Pharmacy Product Brief - Raw Product Knowledge, Lab Data & Existing Pharmacy-Channel Sales

Pharmacy Buyer Snapshot

Buyer check	Detail
Product category	62% 2-way humidity control storage accessory for dried flower medicinal cannabis
Patient use	Placed inside a sealed tub, jar, bag, or suitable container with dried flower
Existing pharmacy-channel sales	Yes - supplied through medical cannabis portals / pharmacy-linked channels, including Easykind
Proven retail pricing	\$2.50 single pack / \$7.50 three-pack
Retail margin indicator	Approx. 45% based on prior wholesale supply pricing and proven retail pricing
Lab data available	Yes - Cannalysis COA comparison across ambient and refrigerated storage
Microbial testing	All tested samples passed microbial analysis, including samples stored with moisture packs
Australian trade mark	Trade Mark 2594215 - Class 5 medical cannabis; Class 16 humidity control packaging products

Headline Lab Result: Refrigerated Storage With Pack vs No Pack

This is the strongest pharmacy-facing result in the supplied COA data. In the refrigerated Month 3 comparison, the sample stored with a moisture pack showed higher moisture, higher retained cannabinoid readings and materially stronger terpene readings than refrigerated storage without a pack, while both samples passed microbial testing.

Metric	No pack	With pack	Difference
Moisture	11.94%	13.65%	+1.71 percentage points / +14.3%
Total THC	173.0 mg/g	183.1 mg/g	+10.1 mg/g / +5.8%
Total cannabinoids	199.9 mg/g	211.4 mg/g	+11.5 mg/g / +5.8%
D9-THC	11.68 mg/g	13.04 mg/g	+1.36 mg/g / +11.6%
THCa	183.9 mg/g	193.9 mg/g	+10.0 mg/g / +5.4%
Total terpenes*	0.0115 mg/g	0.3756 mg/g	+0.3641 mg/g / +3166%
Microbial	Pass	Pass	Pass both

**Total terpenes summed from detected analytes. ND treated as zero. This is a comparison from the supplied COA sample set, not a guaranteed outcome claim across all products or conditions.*

Australian Trade Mark - Pharmacy Relevance

LEAFLOCK - Trade Mark number **2594215** | Owner: LeafLock & Co Pty Ltd | Registered 20 May 2026 (from 12 Oct 2025) | Expiry 12 Oct 2035

Class 5: medical cannabis | **Class 16:** humidity control sheets of paper or plastic for foodstuff packaging

Pharmacy-safe trade mark wording
LeafLock is an Australian trade marked brand registered for use in relation to medical cannabis and humidity control packaging products.

Core Positioning

LeafLock 62% 2-way humidity control packs are a storage accessory for dried flower medicinal cannabis. The pack is placed inside a sealed container with dried flower to help maintain a stable 62% relative humidity (RH) environment.

Pharmacy-safe explanation: LeafLock does not medicate, dose, treat or alter the prescribed product. It supports the patient storage conditions after dispensing.

Product Details

Item	Detail
Product	LeafLock 62% 2-way humidity control pack
Primary pharmacy use	Add-on storage accessory for patients dispensed dried flower medicinal cannabis
Use method	Place pack inside a sealed tub, jar, bag, or other suitable container with dried flower
Proven retail pricing	\$2.50 per single pack / \$7.50 per 3-pack
Existing channel proof	Consistent sales through medical cannabis portals / pharmacy-linked channels, including Easykind, for over a year
Estimated retail margin	Approx. 45% based on previous wholesale supply pricing

Why Patients Need It

Dried flower continues to lose or gain moisture after dispensing depending on the patient storage container, temperature, how often the container is opened and the surrounding environment. Poor storage can affect texture, smell, handling and perceived freshness.

- If flower becomes too dry, it can become brittle and harsher to handle.
- Aroma can become flatter when volatile compounds are not well preserved.
- Patients who receive multiple tubs may store some product for weeks, not days.
- A low-cost storage accessory is easier for pharmacy staff to explain than a complex device or high-price upsell.

Lab-Tested Comparison Summary

LeafLock has supporting COA data from Cannalysis comparing Month 3 flower samples stored with and without a moisture pack under ambient and refrigerated conditions. Tests include moisture, cannabinoid analysis, terpene analysis and microbial analysis.

Storage Condition Comparison

Storage condition	Moisture	Total THC	Total cannabinoids	D9-THC	THCa	Total terpenes*	Microbial
Ambient - no pack	12.06%	174.0 mg/g	201.2 mg/g	14.47 mg/g	181.9 mg/g	0.4283 mg/g	Pass
Ambient - with pack	13.97%	176.2 mg/g	201.9 mg/g	14.77 mg/g	184.1 mg/g	0.3513 mg/g	Pass
Refrigerated - no pack	11.94%	173.0 mg/g	199.9 mg/g	11.68 mg/g	183.9 mg/g	0.0115 mg/g	Pass
Refrigerated - with pack	13.65%	183.1 mg/g	211.4 mg/g	13.04 mg/g	193.9 mg/g	0.3756 mg/g	Pass

*Total terpenes summed from detected analytes. ND treated as zero.

Raw Lab Interpretation

The strongest clean claim is not that the pack "improves the medicine". The correct claim is that samples stored with a moisture pack showed better moisture stability and higher retained cannabinoid readings, with the strongest terpene effect seen in refrigerated storage.

Comparison: With Pack vs No Pack

Comparison	Moisture	Total THC	Total cannabinoids	D9-THC	THCa	Total terpenes	Microbial
Ambient: with vs no pack	+15.8%	+1.3%	+0.3%	+2.1%	+1.2%	-18.0%	Pass both
Refrigerated: with vs no pack	+14.3%	+5.8%	+5.8%	+11.6%	+5.4%	+3166%	Pass both

What This Means for Pharmacy Staff

- The pack supports a stable humidity environment inside a sealed storage container.
- In the COA comparison, packed samples had higher moisture readings than unpacked samples in both ambient and refrigerated storage.
- Packed samples had higher retained cannabinoid readings than unpacked samples in both conditions.
- The refrigerated pack comparison showed materially stronger terpene retention than refrigerated storage without a pack.
- All tested samples passed microbial testing, including those stored with moisture packs.

Detailed Results

Moisture Results

Condition	No pack	With pack	Difference
Ambient	12.06%	13.97%	+1.91 percentage points / +15.8%
Refrigerated	11.94%	13.65%	+1.71 percentage points / +14.3%

Use this claim: In the supplied COA comparison, the samples stored with a moisture pack maintained higher moisture content than the samples stored without a pack.

Cannabinoid Results

Condition	No pack	With pack	Difference
Ambient total THC	174.0 mg/g	176.2 mg/g	+2.2 mg/g / +1.3%
Ambient total cannabinoids	201.2 mg/g	201.9 mg/g	+0.7 mg/g / +0.3%

Condition	No pack	With pack	Difference
Refrigerated total THC	173.0 mg/g	183.1 mg/g	+10.1 mg/g / +5.8%
Refrigerated total cannabinoids	199.9 mg/g	211.4 mg/g	+11.5 mg/g / +5.8%

Use this claim: In the supplied COA comparison, packed samples showed higher retained cannabinoid readings than unpacked samples. Avoid saying LeafLock increases potency.

Terpene Results

Condition	No pack total terpenes	With pack total terpenes	Difference
Ambient	0.4283 mg/g	0.3513 mg/g	-0.0770 mg/g / -18.0%
Refrigerated	0.0115 mg/g	0.3756 mg/g	+0.3641 mg/g / +3166%

Use this claim: The refrigerated comparison showed substantially higher terpene readings when stored with a moisture pack compared with refrigerated storage without a pack.

Detected terpene analytes: limonene, linalool, alpha-pinene, beta-pinene, beta-caryophyllene, alpha-humulene, beta-myrcene, geraniol, nerolidol, p-cymene, alpha-bisabolol and camphene.

Microbial Results

All samples passed microbial testing. This addresses a common pharmacy objection about humidity control creating microbial risk.

Microbial panel	Result
Aspergillus fumigatus, niger, flavus, terreus	ND / Pass
Salmonella spp	ND / Pass
STEC	ND / Pass

Use this claim: In the supplied COA data, samples stored with moisture packs passed microbial testing. Do not say the product prevents mould.

Existing Pharmacy-Channel Sales Proof

Proof point	Detail
Sales history	LeafLock humidity packs have been sold in Australia for over three years.
Pharmacy / medical channel example	Easykind has listed LeafLock 62% packs through its online portal for over a year.
Proven retail pricing	\$2.50 per unit or \$7.50 per 3-pack.
Margin at proven pricing	Approx. 45% retail margin based on prior wholesale supply pricing.
Commercial fit	Low-cost add-on to dried flower dispensing; small footprint; easy to display, ship and replenish.

Recommended Pharmacy Staff Script

Staff script
LeafLock is a 62% humidity control pack designed to be placed inside a sealed container with dried flower medicinal cannabis. It helps maintain a more stable humidity environment during storage. Supporting COA comparison data showed samples stored with a moisture pack had higher moisture readings and higher retained cannabinoid readings than samples stored without a pack. The refrigerated comparison also showed substantially higher terpene readings with the moisture pack. The tested samples with moisture packs passed microbial testing.

Do Say

- Supports dried flower storage after dispensing.
- Helps regulate humidity inside a sealed container.
- 62% RH storage accessory for dried flower patients.
- COA comparison data showed higher retained moisture and cannabinoid readings with moisture packs.
- Samples with moisture packs passed microbial testing in the supplied COA data.
- Existing pharmacy-channel retail has worked at \$2.50 single / \$7.50 three-pack with approx. 45% margin.

Do Not Say

- Do not say it makes medicinal cannabis stronger or increases potency.
- Do not say it treats, doses, cures, prevents mould, or changes therapeutic effect.
- Do not say it guarantees terpene preservation in all settings.
- Do not say it restores old or damaged flower.

Clean Closing Statement for Pharmacists

LeafLock is an Australian trade marked humidity control solution developed for dried flower storage. Supporting laboratory comparison data demonstrated higher retained moisture levels, higher retained cannabinoid readings, substantially stronger terpene retention under refrigerated storage conditions, and successful microbial compliance across all tested samples. The product has established sales history through Australian medicinal cannabis channels and is designed as a simple, low-cost pharmacy add-on for dried flower patients.

Source note: Table values should be treated as the primary reference as they map back to the original supplied COA data. Results are from the supplied Month 3 comparative sample set and should be presented as supporting product data, not as a therapeutic or guaranteed performance claim.
