

LeafLock Wholesale

Complete beginner guide — make changes & update the website

Printed 05 July 2026 · No coding experience needed for most tasks

Read this first. The most common job is updating product prices on the stockist order form. That uses the spreadsheet in this folder — not code.

What is in this folder on your PC

- **wholesale-catalog-template.csv** — product list for the order form
- **LeafLock-Wholesale-Complete-Guide.pdf** — this guide (save or print it)
- **START-HERE.txt** — quick links

Important website links

What	Web address
Live wholesale site	https://www.wholesale.leaflock.com.au
Admin dashboard	https://www.wholesale.leaflock.com.au/admin/
Stockist login / order form	https://www.wholesale.leaflock.com.au/portal.html
Demo (try the portal)	https://www.wholesale.leaflock.com.au/demo.html
New stockist sign-up	https://www.wholesale.leaflock.com.au/request-access.html
Gummy email checkout	https://www.wholesale.leaflock.com.au/gummy-checkout.html
Your email	info@leaflock.com.au

PART 1 — Update prices & products (easiest)

This is what you will do most often. You use **Excel** and the **Admin** page. You do **not** need to write code.

Step 1 — Get the spreadsheet

Use the file **wholesale-catalog-template.csv** in this folder.

Or download a fresh copy anytime:

1. Open **Admin** → log in with your admin password
2. Click the **Wholesale** tab
3. Click **Download spreadsheet**

Step 2 — Edit in Excel

1. Double-click the CSV file (opens in Excel)
2. Change prices, names, or add rows for new products
3. **Do not change the top row** — that row has column headings
4. When finished: **File** → **Save As** → **CSV (Comma delimited) (*.csv)**
5. If Excel asks about saving as CSV, click **Yes**

Step 3 — Upload to the website

1. Go to **Admin** → **Wholesale**
2. Click **Upload updated CSV**
3. Pick your saved file
4. Wait for the green success message
5. Open the **portal** and check the order form — it updates straight away

Spreadsheet columns explained

Column	What you type
Category	Group name (e.g. Gummy mix 90g)
SKU	Product code — must be unique
Product Name	What stockists read on the form
Wholesale ex GST	Your price — numbers only, e.g. 15.99
RRP	Shop retail price
MOQ	Minimum order (blank = no minimum)
Bulk/Notes	Extra text under the product
Image URL	Leave blank unless you know the image link
Bundle	Type Y for cartons / multi-packs
Units per bundle	e.g. 24 for a gummy carton
Active	Y = show on form · N = hide product

Adding a new product

Add a new row at the bottom. Give it a new **SKU** nobody else uses. Set **Active** to Y. Upload the file again.

Hiding a product (stop selling it)

Change **Active** from Y to **N** on that row. Upload again.

PART 2 — Admin dashboard (day-to-day)

Log in at <https://www.wholesale.leaflock.com.au/admin/>

Wholesale tab — what you do here

Upload / download spreadsheet — Update the order form (Part 1 above)

Access applications — When a shop applies — click Approve or Reject

Retail store accounts — See who can log in; Reset password if they forgot

Orders — See orders; change status (processing, shipped, etc.)

System status — Green ticks = email, PayPal, catalogue working

When you approve a new stockist

1. Click **Approve** on their application
2. They get an email with a link to set their password (if email is working)
3. If no email — copy the setup link from the popup and send it yourself from info@

Demo login (for testing)

Email	demo@leaflock.com.au
Password	Demo-Stockist-2026!
Quick link	https://www.wholesale.leaflock.com.au/demo.html

Use this to check pricing and the order form before telling stockists.

PART 3 — Change website words or colours (optional)

Only needed if you want to change headlines, paragraphs, or colours — not prices. Prices go in the **spreadsheet** (Part 1).

Tools (free)

- **VS Code** — download from code.visualstudio.com
- Open folder: **C:\Users\wordo\LL-Wholesale**
- Browser: Chrome or Edge

Golden rules

- Save the file (Ctrl + S) before checking the browser
- Refresh the page (F5) to see changes
- Change one small thing at a time
- Ctrl + Z to undo mistakes
- Never share passwords online

Which file to open

Change...	Open this file
Home page words	index.html
Portal login words	portal.html
Green buttons / dark theme	assets\styles.css
Logo picture	assets\brand\leaflock-logo.png
Top menu links	assets\layout.js

How to change a sentence

1. Open the HTML file in VS Code
2. Press **Ctrl + F** and search for the words you see on the website
3. Edit the text — only the readable words, not the <tags>
4. Save and refresh the website

How to change the green colour

1. Open **assets\styles.css**
2. Near the top find: **--ll-green: #95d05d;**
3. Change the colour code (Google “html color picker” for ideas)
4. Save and refresh

Put text/colour changes LIVE on the internet

Spreadsheet uploads go live instantly (Part 1).

For HTML/CSS file edits, an adult needs to upload to GitHub:

1. Open Terminal in VS Code in the project folder
2. Type: **git add** then the filename
3. Type: **git commit -m "describe change"**
4. Type: **git push**
5. Wait 2–5 minutes, then hard-refresh the site (Ctrl + Shift + R)

PART 4 — Leave these alone (for now)

- server.js — runs the whole site
- lib\ folder — orders, login, PayPal logic
- data\ folder — real customer data
- .env.local — secret passwords
- lib\pricing.js — gummy bulk rules & free shipping (ask for help first)

If something goes wrong

Problem	Try this
Spreadsheet upload failed	Read the red error on Admin. Usually a duplicate SKU or missing price.
Excel looks messy	Widen columns. Save as CSV again — not .xlsx.
Portal looks old after upload	Hard refresh: Ctrl + Shift + R. Or log out and back in.
Stockist can't log in	Admin → find their store → Reset password → email them the link.
PayPal button missing	Check Admin → System status. PayPal should show a green tick.
Undo a bad file edit	Ctrl + Z in VS Code, or ask someone to restore from Git.

PART 5 — Security (always follow)

Never paste passwords or API keys in chat, text messages, or GitHub. That includes admin passwords, email app passwords, PayPal secrets, and Australia Post API keys.

- Secrets live only on Render → leaflock-retail-wholesale → Environment
- On your PC: .env.local and data\leaflock-render-env.json (never commit these)
- If a key was shared by mistake: revoke it at the provider, create a new one, add only in Render
- Tell your developer “updated on Render” — do not send the new key in chat
- Before git push: run npm run secrets:check

Quick cheat sheet

I want to...	Do this
Change product prices	Edit CSV → Admin → Upload
Approve a new shop	Admin → Wholesale → Approve
See orders	Admin → Wholesale → Orders
Test the portal	demo.html + demo login
Change homepage text	index.html in VS Code → git push
Change green colour	assets\styles.css → git push

You're done. For most updates: edit the spreadsheet, upload in Admin, check the portal. Questions: info@leaflock.com.au
